Facing Change Again: Meta-Analyses of Gender and Climate Change Attitudes Worldwide

As the need to address climate change grows increasingly pressing, so does the need for understanding the factors that undermine public support for mitigation. One prominent recent analysis of three cross-national surveys argues that people—especially men—in richer countries express less concern for climate change and see more costs and fewer benefits to mitigation, pointing to compensation as a potential solution. Drawing on hundreds of surveys, this reassessment employs a series of meta-analyses to reveal that while gender differences in climate concern are indeed larger in richer countries, both men and women express more concern in such settings relative to poorer countries, and there is no relationship between economic development and gender differences in mitigation's perceived costs and benefits. Instead, gender differences in climate concern are mirrored in differences in concern across a wide array of risks, consistent with more widespread masculine performative fearlessness in richer countries.

Facing Change Again: Meta-Analyses of Gender and Climate Change Attitudes Worldwide

As the need to address climate change grows increasingly pressing, so does the need for understanding the factors that undermine public support for mitigation. One prominent recent analysis of three cross-national surveys argues that people—especially men—in richer countries express less concern for climate change and see more costs and fewer benefits to mitigation, pointing to compensation as a potential solution. Drawing on hundreds of surveys, this reassessment employs a series of meta-analyses to reveal that while gender differences in climate concern are indeed larger in richer countries, both men and women express more concern in such settings relative to poorer countries, and there is no relationship between economic development and gender differences in mitigation's perceived costs and benefits. Instead, gender differences in climate concern are mirrored in differences in concern across a wide array of risks, consistent with more widespread masculine performative fearlessness in richer countries.

Keywords: Climate change, public opinion, hegemonic masculinity, risk perceptions, meta-analysis

Word Count: 4794

Climate change and its devastating consequences for humanity have been well understood among scientists for many decades, yet no country has adopted policies commensurate with the scale of the threat. Because policymaking to fight climate change depends on public opinion that recognizes the problem (Bromley-Trujillo and Poe 2020), identifying the sources of attitudes toward climate change is crucial. One prominent recent article, Bush and Clayton (2023), builds on findings that women in the United States and Europe express more concern about climate change than men (see, e.g., Egan and Mullin 2017, 215; Ergun, Karadeniz, and Rivas 2024, 9) to advance our understanding of this increasingly pressing issue. It makes three claims, each building on the last. The first claim is that the gender gap in climate change concern is larger in richer countries than in poorer ones. The second is that this wider gap is due to lower levels of concern in richer countries than in poorer countries, levels that are especially low among men. The third claim is that these patterns arise because people in richer countries, and especially men, perceive more costs and fewer benefits of policies designed to mitigate climate change. Drawing on three cross-sectional surveys and a paired case study of focus groups in Peru and the United States, Bush and Clayton (2023) finds evidence to support each of these claims.

This reassessment assembles a comprehensive collection of data on climate change attitudes comprising over 3000 national surveys and reexamines these three claims by drawing on meta-analysis tools growing in popularity in political science. This much larger evidentiary base confirms that the difference in climate change concern between men and women is generally larger in richer countries. But relatively few surveys show men in richer countries expressing lower levels of climate change concern than men in poorer countries—in fact, consistent with postmaterialist theory (see, e.g., Inglehart 1977, 2018; Inglehart and Welzel 2005), meta-analysis of the available cross-national surveys indicates the opposite is the case. Moreover, a meta-analysis of surveys directly asking respondents to assess the costs, benefits, or both of policies fighting climate change show little to no differences between men and women in these attitudes. XXXXX

1 Gender Differences in Climate Change Concern

The first of the three claims made in Bush and Clayton (2023, 592) has to do with "variation in the climate gender gap." Specifically, it holds that the difference between women and men in climate change concern is larger in richer countries than in poorer ones. The main models of Bush and Clayton (2023, 593, Table 1, Models 1 and 4, see also 600, Figure 4) estimate the following equation for the climate concern of individual i in country j:

$$\begin{aligned} Concern_{ij} =& \gamma_{00} + \gamma_{01} Log(GDP/capita)_j + \gamma_{10} Women_{ij} \\ &+ \gamma_{11} Log(GDP/capita)_j \times Women_{ij} + r_{0j} + r_{1j} Women_{ij} \end{aligned} \tag{1}$$

That is, they are hierarchical models with varying intercepts for each country (r_{0j}), varying slopes for the coefficient for the gender of the respondent in each country (r_{1j}), and a cross-level multiplicative interaction between country economic development and respondent gender (captured by γ_{11}). Positive values of γ_{11} indicate support for this first claim. And the estimates of γ_{11} are in fact positive in models of one item on climate concern from the 2016/2017 AmericasBarometer (Model 1), and one item from the 2015 Pew Global Attitudes Survey (Model 4), as well as one item from a ten-country survey conducted by the work's authors in 2019-2020 (600, Figure 4), providing evidence that the difference in climate concern expressed by women and men is larger in richer countries.

The three surveys analysed in Bush and Clayton (2023), however, represent only a tiny fraction of the available surveys that asked respondents questions on how concerned they are about climate change. Given the importance of the topic, it should come as no surprise that questions on climate concern have been included in many cross-national surveys, including not only four waves of the AmericasBarometer and seven Pew Global Attitudes Surveys, but also such well-known surveys as the Arab Barometer, the Eurobarometer, and the World Values Survey. In fact, 107 different surveys of at least ten countries asked 89 different items on concern for climate change, a total of 265 survey-items altogether (details on these survey-items and the procedure employed to identify them are available in the online supplemental materials).

The large number and wide variety of these survey items makes their collective analysis difficult. This is a common issue. Despite long-standing advice to maximize the evidence

employed to test theories (see, e.g., King, Keohane, and Verba 1994), survey research frequently takes advantage of the data available in only one or just a few surveys. This is understandable given the difficulty of incorporating the evidence provided by different items from different surveys. Simply presenting and interpreting separate analyses of each of the available survey-items is straighforward, at least superficially, but the feasibility of this approach collapses as the number of survey-items increases and the results their analysis provide diverge. Pooling multiple surveys provides a means to bring more data to bear, but it depends on identical items and response categories across the surveys: a long literature on question wording effects cautions against pooling even such similar questions as "How concerned are you about climate change?" (asked in the Life in Transition Survey, Wave 2) and "How concerned are you, if at all, that global climate change will harm you personally at some point in your lifetime?" (asked in the 2015 Pew Global Attitudes Survey) together in a single analysis (see, e.g., Rugg 1941; Krosnick, Malhotra, and Mittal 2014; Solt et al. 2016). A diversity of items enables a variety of techniques to minimize measurement error—including principal components analyses (PCA), item response theory models (IRT), and weighted scales indices (WSI)—but these methods of combining multiple items into a single dependent variable depend on those items being answered by the same respondents (see, e.g., Stoetzer, Zhou, and Steenbergen 2025; Fu and Green 2026). Recent contributions to the study of comparative public opinion have dealt with the issue of incomparability across surveys and items by estimating latent variables (see, e.g., Claassen 2020; Woo, Goldberg, and Solt 2023; Woo et al. 2025); these methods, however, typically generate measures at the country-year level and so prevent examination of individual-level variables like gender (but see Caughey, O'Grady, and Warshaw 2019).

Meta-analysis supplies an approach to resolving these complications. Meta-analysis provides a tool to "consolidate the overall effect size" from many analyses (Godefroidt 2023, 25). Although meta-analysis has not been frequently employed in political science—Arel-Bundock et al. (2026, 38) counts just 85 articles employing the method across 141 journals in political science and closely adjacent fields through 2021—it is growing increasingly common in the discipline (see, e.g., Barceló Forthcoming; Graham Forthcoming).

Typically the analyses to be consolidated have already been published in many different articles (see, e.g., Schmid, Stijnen, and White 2020), but as Goh, Hall, and Rosenthal

(2016) observes that one can also conduct meta-analysis to cumulate the evidence provided by one's own original analyses within the same manuscript, a procedure that article labels "mini meta-analysis." Political scientists have recently begun to take advantage of this technique. Pérez, Vicuña, and Ramos (2024) presents a mini meta-analysis of five original experiments on solidarity among people of color, and Gazmararian and Milner (Forthcoming) uses meta-analysis to summarize the results of four separate multilevel models of different climate shocks' effects on the likelihood that respondents to the 2019 World Risk Poll considered climate change to be among the top two risks to their safety in their daily lives. Pérez, Lee, and Luna (2025) analyses data from each of seven surveys on the relationship between partisanship and the prioritization of racial or American identification, presents the separate results, and offers a mini meta-analysis of those findings. This last research design points toward the solution offered here: when many surveys include different items operationalizing the same concepts, perform original analyses of all of the available surveys, and use meta-analysis to combine the results. As the novel analyses to be collectively assessed in the present work number in the hundreds, 'mini' is an inaccurate descriptor of this meta-analytic technique; "original meta-analysis" is therefore proposed as a more general label for meta-analyses of original studies.

The original meta-analysis to assess the evidence for the first claim of Bush and Clayton (2023), then, proceeds as follows. First, mirroring exactly the main analyses of Bush and Clayton (2023), equation Equation 1 is estimated for each of the 265 cross-national survey-items of climate concern, with logistic regression employed for responses to dichotomous survey items, ordinal logistic regression for survey items with three or four ordered response categories, and linear regression for items with five or more ordered response categories. In the language of meta-analysis, each of these analyses is a study. Next, following standard meta-analytic practice (see, e.g., Schmid, Stijnen, and White 2020, 35; Godefroidt 2023, 25), the estimate of the coefficient for the change in the difference across genders with economic development (that is, γ_{11}) from each study is converted to a correlation to impose a common scale, and because the sampling distribution of correlations is skewed, the Fisher's z transformation is applied to each correlation to yield a normal distribution of effect sizes. Finally, these effect sizes are themselves modeled in a Bayesian multilevel model that includes varying intercepts for each survey (as the results for different items in the same survey are not independent) and each distinct survey item

(as the results for the same item asked in different surveys are not independent); the use of a Bayesian approach allows the uncertainty in the correlations due to sampling error to be seamlessly incorporated into the model.[1]

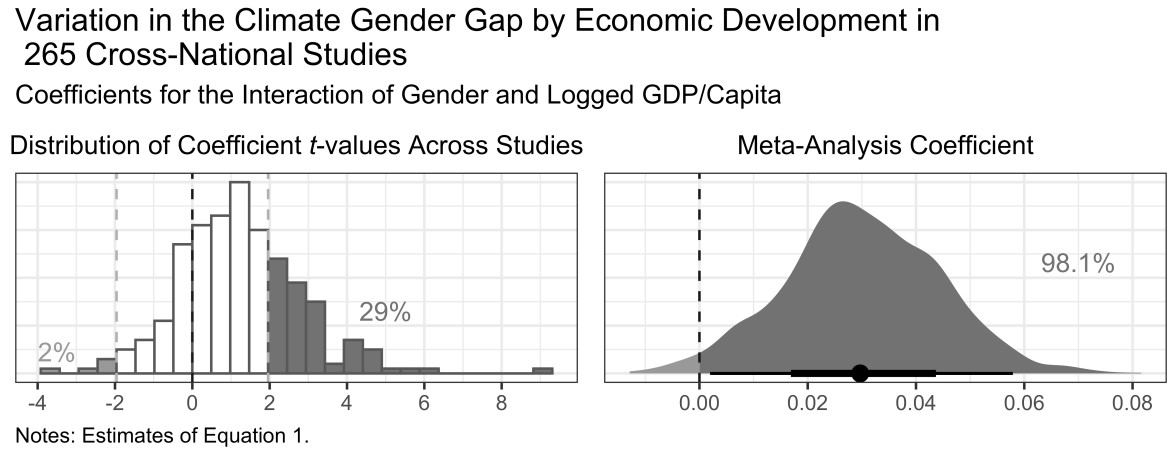

Figure 1: The Difference Between Women and Men in Climate Concern Is Generally Larger in Richer Countries Than in Poorer Countries

These results are plotted in Figure 1. The correlation between respondents' gender and their climate concern expressed in a single survey item appears on the y-axis; the vertical whiskers on each point represent uncertainty in the correlation due to sampling error. The economic development of the country at the time of the survey, measured as in Bush and Clayton (2023) as the log of GDP/capita, is on the x-axis.

The left panel displays the distribution of t-values for the coefficients of the interaction between gender and logged GDP/capita across studies. The findings are not consistent across studies. Some studies yield negative values, indicating a *decreasing* climate gender gap; in 2% of the studies, this negative result even reaches statistical significance at the 95% level. Most studies do give positive values for γ_{11}, though only in 29% of the studies do the coefficient estimates reach statistically significance at that level. Were a researcher to examine only one or a few survey-items, as in Bush and Clayton (2023), the conclusion reached would depend on which surveys and items were analyzed. Even with the full distribution of study results, it is not immediately evident whether the claim that the climate gender gap is larger in richer countries than in poorer ones is supported: about seven in ten studies yield a null result.

The right panel, however, displays the posterior probability distribution of the meta-

[1]XXXXX on meta-regression

analysis coefficient that consolidates these findings. It indicates that, taking into account the dependence between studies of items in the same survey and studies of the same item in different surveys (and conditional on this collection of the available data as well as the uninformative prior), the probability that the correlation between whether a respondent is a woman and the climate concern that respondent expresses is larger at higher levels of economic development is over 98%. This result provides support for the finding of the main models of Bush and Clayton (2023) for that article's first claim: women express increasingly more concern about climate change than men where GDP/capita is higher. As this conclusion is based on a comprehensive set of cross-national survey-items on the topic, an evidentiary base roughly 90 times the size of that presented in Bush and Clayton (2023), we can now be much more confident that this first claim is supported by the available evidence.

2 Economic Development and Climate Change Concern

The second claim of Bush and Clayton (2023) is that the wider differences in concern among men and women in richer countries arise because "*both* men and women will be less concerned about climate change in wealthier countries than in poorer countries, but that men's concern will decline more rapidly" (Bush and Clayton 2023, 591). The article's analyses of the three cross-national surveys it examined each indicate climate concern is lower in richer countries and particularly among the men of those countries (Bush and Clayton 2023, 593–94 and 600).

This claim and these findings are both surprising. One of the most influential theories in comparative public opinion over the past half century, Inglehart's postmaterialism thesis, holds that as countries grow richer, the values of their citizens will shift beyond worries for order and immediate material security to broader concerns for individual autonomy and quality of life (see, e.g., Inglehart 1977, 2018; Inglehart and Welzel 2005), notably including the protection of the environment (see, e.g., Inglehart 1995; Welzel 2013). That is, the postmaterialism thesis would lead us to expect the opposite of the claim put forward in Bush and Clayton (2023), that climate concern should be expected to be higher in richer countries than poorer ones.

Which theory is supported by the available evidence? The interaction term in Equa-

tion 1 means the estimated conditional effect of economic development on climate concern depends on the gender of the respondent as follows:

$$\frac{\partial Concern_{ij}}{\partial Log(GDP/capita)_j} = \gamma_{01} + \gamma_{11} Women_{ij} \tag{2}$$

Estimates of this conditional effect were calculated for women and for men from each of the 265 studies described above and similarly converted to correlations with the Fisher's z transformation applied. And again, these correlations are themselves modeled in a Bayesian multilevel model with varying intercepts for each survey and for each survey item that also incorporates the uncertainty in the correlations due to sampling error.

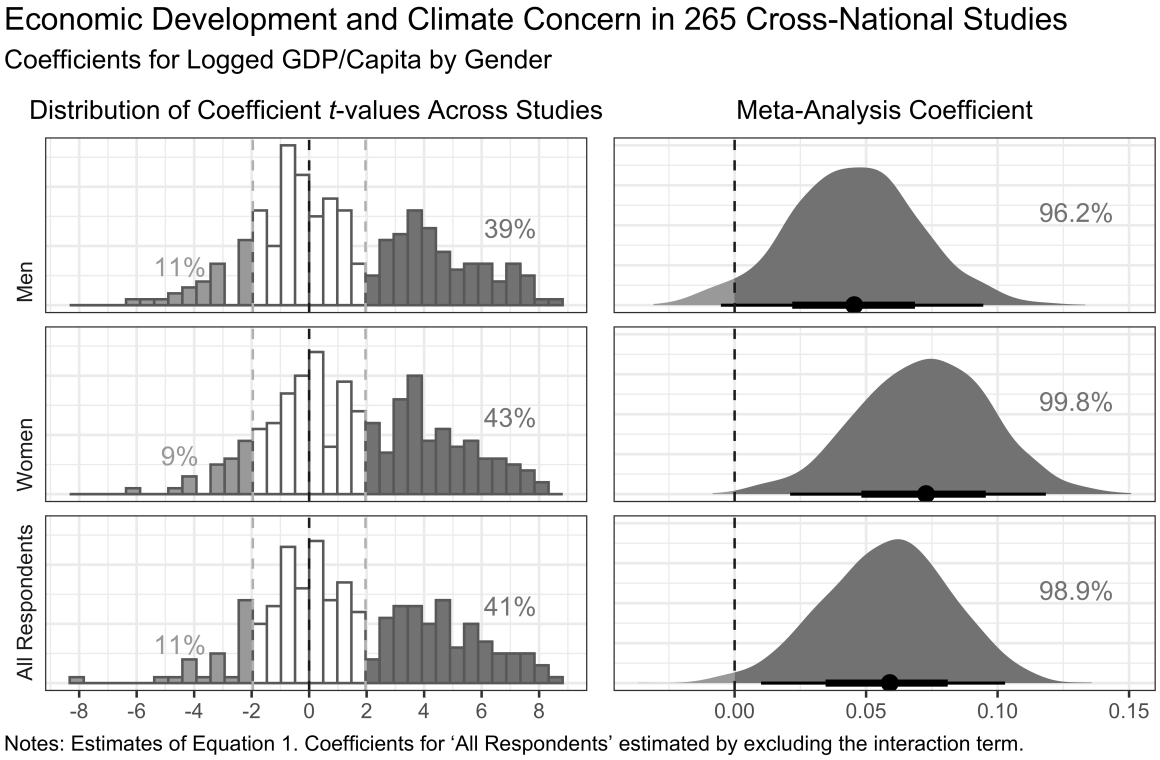

Figure 2: Both Men and Women Tend to Express More Concern About Climate Change in Richer Countries Than in Poorer Countries

Figure 2 shows the findings. The panels on the left side display the distribution of t-values of the coefficients for logged GDP/capita in these analyses, with the top and middle panels showing estimated conditional effects for men and for women calculated using Equation 2 and the bottom panel the estimated effect on all respondents when the interaction term is omitted from the model. Only about one in ten of these cross-national analyses evince a statistically significant negative relationship between economic

development and concern for climate change similar to those presented in Bush and Clayton (2023). On the contrary, most estimated effects are positive, and a large share are both positive and statistically significant at the 95% level.

As in the previous section, meta-analysis provides the means of reaching conclusions based on all of the available evidence. The resulting posterior probability distributions of the meta-analysis coefficient for logged GDP/capita are shown in the right-hand panels of Figure 2. The vast bulk of each is positive: in even the smallest, the estimated effect of economic development for men, 96.2% of the posterior is positive. Consistent with the postmaterialism thesis—and contrary to the second of the claims presented in Bush and Clayton (2023)—both women and men in richer countries generally express *more* concern about climate change, not less, than people in poorer countries.

3 Gender and Perceptions of the Benefits and Costs of Mitigation

The third claim Bush and Clayton (2023, 598) advances is that people in richer countries, and particularly men, perceive themselves as having less to gain and more to lose from the major economic and social changes required to mitigate climate change, and their aversion to these losses leads them to express less concern for the problem. The evidence that work presents is based on text analyses of open-ended questions in an original ten-country survey and of focus groups conducted in the United States and Peru; it puts forward no evidence based on more typical survey items.

For the present work, 20 cross-national surveys were identified that include one or more items that tap perceptions of the costs, benefits, or both of climate change mitigation that were asked in ten or more countries (details are presented in the supplemental materials). For example, the 2022 Risks That Matter survey (OECD 2023) asked how much concern respondents felt regarding "rising energy/fuel costs" due to "building up green infrastructure, emissions limits and carbon taxes," while Eurobarometer 95.1 asked respondents their agreement with the statement, "The costs of the damages due to climate change are much higher than the costs of the investments needed for a green transition" (European Commission and European Parliament 2023). As in the earlier examination of climate concern, multiple items in these cross-national surveys are each analysed as a

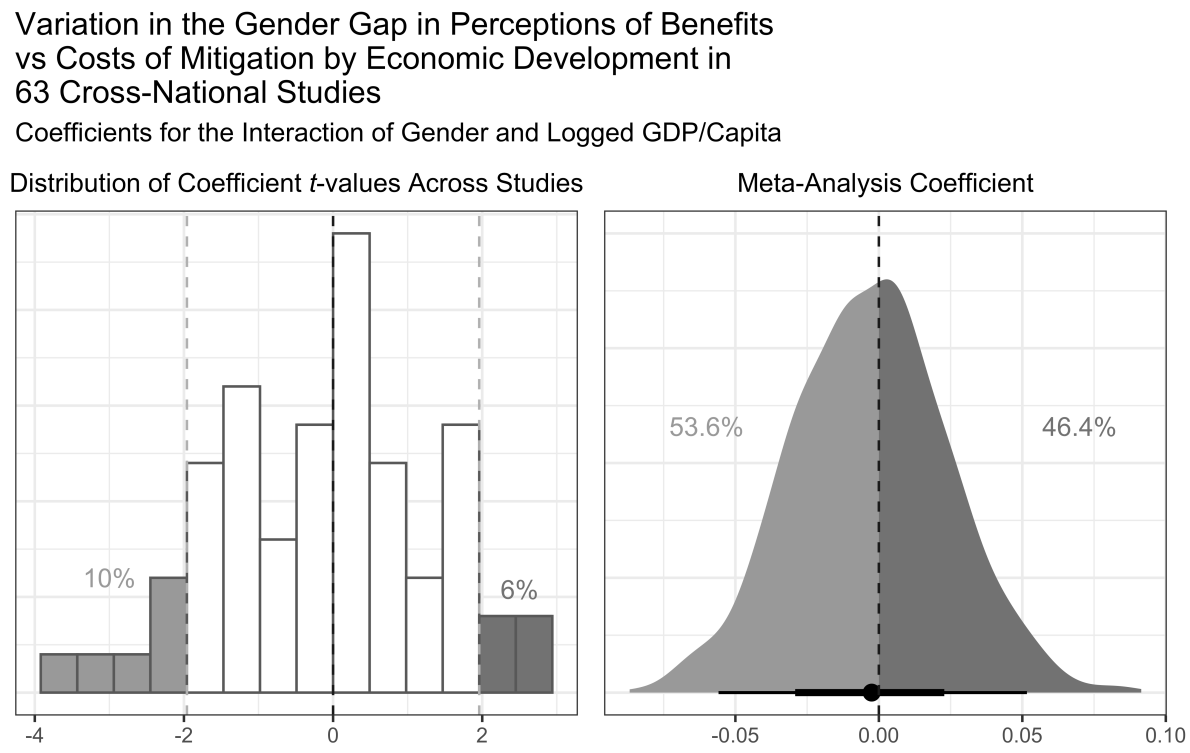

Figure 3: In Richer (and Poorer) Countries, Women and Men Generally Perceive the Benefits and Costs of Mitigation No Differently

separate study (all survey questions on the costs and benefits of mitigation are listed in the supplemental materials). This yields 63 studies in all.

For each study, the z-transformed correlation between the dichotomous gender variable and perceptions of benefits versus costs was calculated. These correlations are plotted against logged GDP/capita in the left panel of Figure 3.

The result contradicts the explanation proposed by Bush and Clayton (2023) for the diverging levels of concern by gender in richer countries. Correlations of gender with perceptions of the benefits versus costs of mitigation appear flat (if not declining) and very nearly zero on average over the entire observed range of economic development. This is confirmed in a meta-regression with varying intercepts for each country, survey, and item: only a third of the posterior for the coefficient for logged GDP/capita is positive, and its median is very close to zero.

But if the differences between women and men in richer countries cannot be explained with diverging perceptions of the costs and benefits of climate change mitigation, then how can they be explained? The next section offers an answer: traditional masculity norms of fearlessness.

4 Conclusions

Heeding the long-standing admonition to maximize the evidence employed to test our theories (see, e.g., King, Keohane, and Verba 1994), this reassessment tested the three claims put forward by a prominent recent work, Bush and Clayton (2023), on gender and climate change concern with meta-analyses of a collection of cross-national surveys many times larger than the three examined in that article. The first claim, that differences between men and women in climate change concern are larger in richer countries, is supported across the thousands of studies presented here. But, contrary to the second claim and consistent with postmaterialist theory, this additional evidence indicates that levels of climate change concern are *higher*, not lower, for both men and women in richer countries. The third claim, that in richer countries men see more costs and fewer benefits than women in climate change mitigation, finds no support in the available surveys.

These findings have several important implications. The first is that research on the political consequences of gender should engage more thoroughly with the burgeoning scholarship on masculinities. This scholarship frequently underscores that, as is the case of other identities, masculinity is most often performed unreflexively, that is, through responses that simply 'feel right' rather than careful consideration of costs and benefits of various alternate courses of action (see, e.g., Thomson 2020, 150–51). In light of this scholarship, the lack of support for gender differences in assessments of the costs and benefits of climate change mitigation is hardly surprising.

A second is a set of very different policy prescriptions than those put forward by Bush and Clayton (2023). That article's finding of gender differences in the perception of climate mitigation costs led to its recommendation to generate support in richer countries by compensating men for the loss of, e.g., such activities as "driving low-mileage vehicles or eating carbon-intensive foods" (Bush and Clayton 2023, 597, 607). As the evidence does not support the argument that men see mitigation as more costly than women, such a strategy is unlikely to work. In fact, by highlighting these costs, compensation schemes may even increase men's opposition.

Much as campaigns to reduce speeding through education on its risks prompt *more* speeding among men enacting traditional masculinity norms (see, e.g., Walker, Butland, and Connell 2000), efforts to communicate the risks of climate change likely only encourage such men to reject the need for mitigation to performatively demonstrate their

fearlessness. Instead, activists and policymakers should incorporate understanding of these norms into their efforts, as in the successful Australian 'pinkie campaign' against speeding. With the slogan, "No One Thinks Big of You," that campaign uses wagging a little finger at men driving recklessly to send the message that others view speeding not as evidence of fearlessness but instead as an attempt to compensate for other shortcomings (Watsford 2008). Shifting men's practices with regard to climate change mitigation from enactments of traditional masculinity norms to those of an 'ecomodern' masculinity that emphasizes embracing technological advances to overcome environmental challenges (see, e.g., Letouneau and Davidson 2024) would seem a promising step along these lines, although invocations of ecomodern masculinity to date have too often focused on such unpromising or unhelpful measures as geoengineering, carbon capture, and biofuels rather than, for example, the electrification of housing and transport (see, e.g., Nagel and Lies 2022). Likewise, appealing directly to traditional masculinity's norms of paternalism, which validate men as protectors who take responsible measures to control threats to others, would likely also help many men move beyond denying the risks of climate change (see Thomson 2020). While either such approach would no doubt frustrate those of us who are eager to simply move beyond the irrational limitations currently imposed on societies by widespread traditional masculinity norms, the urgency with which climate change must now be addressed counsels taking an 'all of the above' approach to building public support for decarbonization.

A final implication of this work is methodological, and it has broad applicability to studies of public opinion. It is that meta-analysis is more than simply a method for reviewing a well-developed literature; it is also a means of maximizing the evidence brought to bear on even novel questions of interest. The growing availability of both cross-national survey datasets (see, e.g., Smith 2015) and tools to programmatically wrangle them (see, e.g., Solt, Hu, and Tai 2019) mean that data constraints alone rarely justify drawing on only one or a few surveys. After a larger body of relevant data is identified, meta-analysis provides a straightforward method for incorporating it into a single coherent investigation. Our understanding of political phenomena will benefit greatly if we make more use of it.

A2 Costs and Benefits of Climate Change Mitigation Survey Items A17
A3 Other Concern Survey Items A23
A4 Meta-Regression Tabular Results A55

A1 Data Collection and Coding

This appendix describes the procedure used to select the survey items employed in this paper in accordance with PRISMA ('Preferred Reporting Items for Systematic Reviews and Meta-Analyses') guidelines. Though these guidelines were designed for the review and meta-analysis of existing literatures, they are useful for describing the procedure employed to identify and collect relevant survey items in meta-analyses of data on novel questions such as those reported in this article.

A1.1 Search Terms and Databases

Items on climate change attitudes asked in cross-national surveys were identified by a series of searches for the terms "climate", "global warming", "greenhouse", and "carbon dioxide." First, a search of the codebooks of the surveys collected in the `DCPOtools` R package (Solt, Hu, and Tai 2019) was performed. This yielded 406 survey-items. Subsequent searches of the data archives at GESIS, the Pew Research Center, the ICPSR, and the UK Data Service yielded four additional surveys—three recent Eurobarometer surveys and an early survey of the Pew Global Attitudes Project—that had yet to be included in `DCPOtools`, with a total of fifteen survey-items. Finally, web searches for these terms (each with "survey" added) identified the series of nine European Investment Bank Climate Surveys that include a total of 62 survey-items.

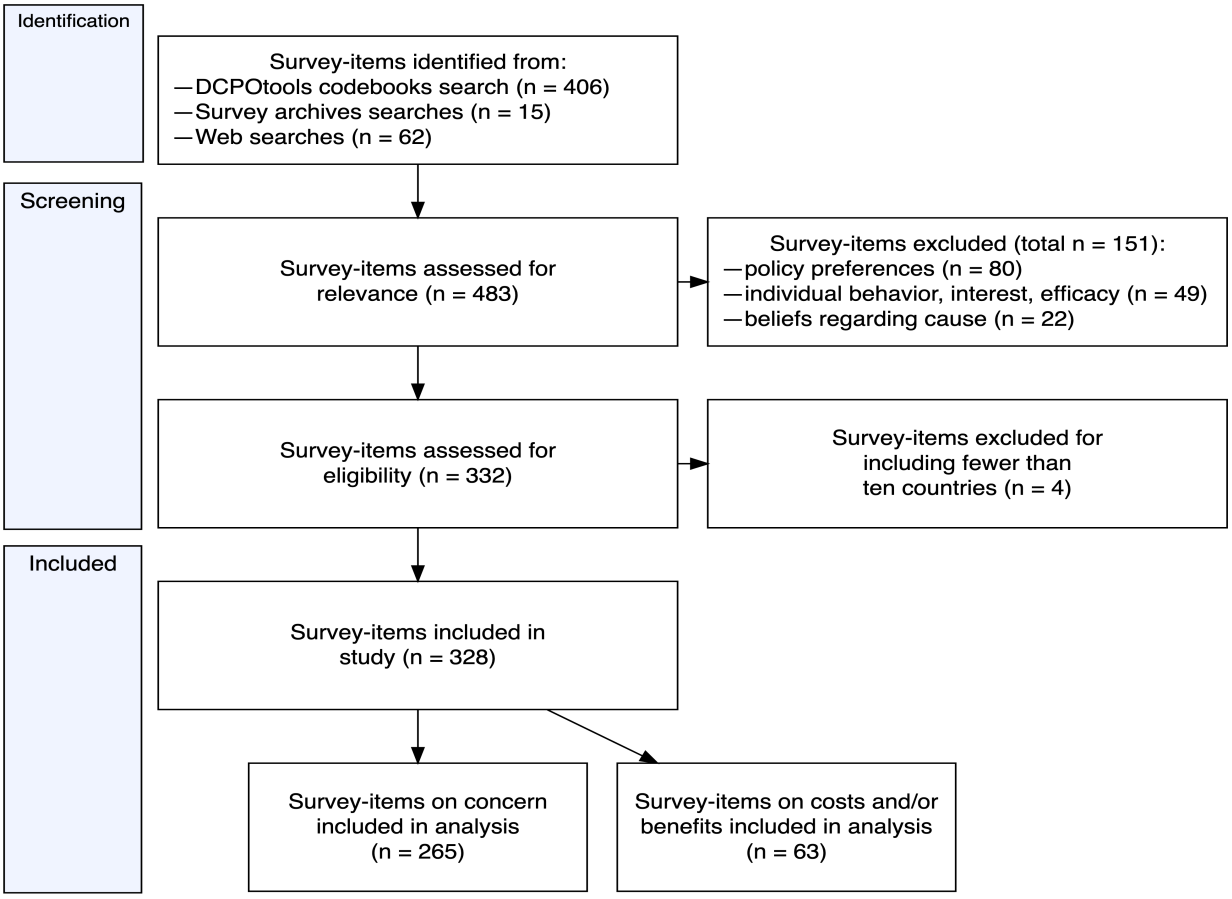

Figure A1: PRISMA Survey Item Selection Process

A1.2 Inclusion and Exclusion Criteria

The inclusion and exclusion criteria for this study were as follows. Relevant climate survey-items are those pertaining to climate concern and the perception of benefits and costs of mitigation. Survey-items relevant to climate concern were identified as those asking respondents about their level of concern or worry (e.g., "how concerned are you about climate change"); their assessment of the seriousness or threat (e.g., "how serious a problem do you think climate change is at this moment"); as well as items asking respondents to identify the most serious or important problems or challenges for their country, an international organization such as the European Union or United Nations, or the world (e.g., "in your opinion, which of the following do you consider to be the most serious problem currently facing the world as a whole: climate change"); and priority relative to other issues (e.g., agreement with "one must give priority to the fight against climate change without considering its negative impact on economic growth"). A complete list of these included survey-items may be found in Table A1.

Survey-items relevant to perceptions of the benefits and costs of mitigation were identified as those asking whether measures to combat climate change (including specific measures, such as limiting fossil fuel imports, using energy more efficiently, or expanding renewable energy) will bring particular benefits (e.g., agreement with "fighting climate change can have a positive impact on the European economy"), those asking whether such measures will bring specified costs (e.g., agreement with "tackling climate change can harm our economy"), and those asking respondents to assess the balance of potential benefits and costs (e.g., "do you think that measures to combat climate change will have a negative, a positive, or neither a negative nor positive impact on your country's economic growth and job market?"). A complete list of these included survey-items can be found in Table A2.

The climate survey-items excluded for lacking relevance fell into three categories. The first comprises survey-items asking about the cause of climate change (e.g., "is climate change caused by natural processes, human activity, or both?"). The second encompasses those questions that asked about individual behavior (e.g., "have you personally taken any action to fight climate change over the past six months?"), efficacy (e.g., "climate change is an unstoppable process, we cannot do anything about it"), interest (e.g., "in everyday life, we have to deal with many different issues, where we feel more or less interested. For each of the following, please indicate whether you are very interested, moderately interested, or not at all interested in: the environment and climate change"), subjective knowledge (e.g., "for each of these topics, can you tell me if you feel very well, fairly well, fairly badly or very badly informed? climate change"), or willingness to sacrifice (e.g., "would you be willing to give part of your income or pay more taxes, if you were sure that the extra money was used to: combat climate change?"). The third consists of those survey-items probing support for particular policies to combat climate change (e.g., "the EU should invest massively in renewable energies, such as wind and solar power") or the relative importance of climate policy to other policy goals, such as reducing inequalities or economic growth. Although each of these groups of excluded questions are likely related to climate concern and/or an assessment of the benefits and costs of mitigation to some extent, they clearly represent distinct concepts.

The eligibility criterion was the number of countries covered by the survey item. Included survey-items were asked in ten or more countries; although ten is a small sample of countries, this is the size of the smallest survey analysed in Bush and Clayton (2023), and

a strength of meta-analysis is its utility in combining insights from possibly underpowered studies. Excluded survey-items were asked in fewer than ten countries.

A1.2.1 Survey Items Used

Table A1: Climate Change Concern Survey Items

Survey	Survey Item Code	Question Text	Response Categories
amb2016	future_problem4	If nothing is done to reduce climate change in the future, how serious a problem do you think it will be for [country]?	1 very serious / 2 somewhat serious / 3 not very serious / 4 not serious at all
amb2018	future_problem4	If nothing is done to reduce climate change in the future, how serious a problem do you think it will be for [country]?	1 very serious / 2 somewhat serious / 3 not very serious / 4 not serious at all
amb2023	future_problem4	If nothing is done to reduce climate change in the future, how serious a problem do you think it will be for [country]?	1 very serious / 2 somewhat serious / 3 not very serious / 4 not serious at all
arabb5	problem4	How serious a problem do you think the following issues are: climate change	1 a very serious problem 2 a somewhat serious problem 3 not a very serious problem 4 not at all a serious problem
eb18	concern4	Finally, more generally, how concerned or worried are you about the following: the possible atmosphere damages affecting the world's weather brought about by the gas (carbon dioxide) emitted from burning coal and oil products	1 a great deal / 2 a fair amount / 3 not very much / 4 not at all
eb29	concern4	Finally, more generally, how concerned or worried are you about the following: the possible atmosphere damages affecting the world's weather brought about by the gas (carbon dioxide) emitted from burning coal and oil products	1 a great deal / 2 a fair amount / 3 not very much / 4 not at all
eb37	concern4	Are you very worried, somewhat worried, not very worried or not at all worried about the following problems? global warming	1 very worried 2 somewhat worried 3 not very worried 4 not worried at all
eb37	env_priority2a	In June 1992, the United Nations Conference for the Environment and Development will be held in Rio de Janeiro, Brazill. In your opinion, should this conference concern itself with the following problems, or not? Global warming	1 yes should 2 no should not
eb431	concern4	Are you very worried, somewhat worried, not very worried or not at all worried about the following problems? global warming	1 very worried 2 somewhat worried 3 not very worried 4 not worried at all
eb511	concern4	At present, are you very worried, somewhat worried, not very worried or not at all worried about the following? Global warming (greenhouse effect)	1 very worried / 2 fairly worried / 3 not very worried / 4 not at all worried
eb511	concern_trend3	And, for each of these, would you say that you are more worried or less worried than 5 years ago? Global warming (greenhouse effect)	1 more worried / 2 less worried / 3 neither more nor less worried
eb511	harm_health3	To what extent do you believe that the following could affect your health in the future? Climate change	1 not at all / 2 a little / 3 a lot
eb57	concern_urgent2	Global warming and climate change are serious issues which need immediate action	1 yes, it is the case / 2 no, it is not the case
eb58	concern4	At present, are you very worried, fairly worried, not very worried or not at all worried about the following topics? Climate change	1 very worried / 2 fairly worried / 3 not very worried / 4 not at all worried
eb621	env_definition2	When people talk about "the environment", which of the following do you think of first? Climate change	0 not mentioned / 1 mentioned

Table A1: Climate Change Concern Survey Items *(continued)*

Survey	Survey Item Code	Question Text	Response Categories
eb621	env_priority2	From the following list, please list the five main environmental issues that you are worried about? Climate change	0 not mentioned / 1 mentioned
eb672	concern_urgent4	Overall, thinking about global warming, do you think that it is a matter that should be dealt with by the European Union urgently or not? It should be dealt with by the European Union...	1 very urgently / 2 fairly urgently / 3 not really urgently / 4 not at all urgently
eb682	env_definition2	When people talk about "the environment", which of the following do you think of first? Climate change	0 not mentioned / 1 mentioned
eb682	env_priority2	From the following list, please list the five main environmental issues that you are worried about? Climate change	0 not mentioned / 1 mentioned
eb692	problem_priority2	In your opinion, which of the following do you consider to be the most serious problem currently facing the world as a whole? Firstly? Climate change	0 not mentioned / 1 mentioned
eb692	concern10	And how serious a problem do you think climate change is at this moment?	1 not a serious problem at all / 23456789 / 10 an extremely serious problem
eb692	denial4	The seriousness of climate change has been exaggerated	1 totally agree / 2 tend to agree / 3 tend to disagree / 4 totally disagree
eb711	top3_challenge2	In your opinion, which of the following do you consider to be the most serious problem currently facing the world as a whole: climate change	0 not mentioned 1 mentioned
eb711	concern10	And how serious a problem do you think climate change is at this moment?	1 not at all a serious problem / 23456789 / 10 an extremely serious problem
eb711	denial4	The seriousness of climate change has been exaggerated	1 totally agree 2 tend to agree 3 tend to disagree 4 totally disagree
eb721	top3_challenge2	In your opinion, which of the following do you consider to be the most serious problem currently facing the world as a whole: climate change	0 not mentioned 1 mentioned
eb721	concern10	And how serious a problem do you think climate change is at this moment?	1 not at all a serious problem / 23456789 / 10 an extremely serious problem
eb721	denial4	The seriousness of climate change has been exaggerated	1 totally agree 2 tend to agree 3 tend to disagree 4 totally disagree
eb742	top2_country_challenge2	What do you think are the two most important issues facing (OUR COUNTRY) at the moment? Climate change	0 not mentioned 1 climate change
eb742	top2_personal_challenge2	What do you think are the two most important issues you are facing at the moment? Climate change	0 not mentioned 1 climate change
eb742	top2_eu_challenge2	What do you think are the two most important issues facing the EU at the moment? Climate change	0 not mentioned 1 climate change
eb753	top2_country_challenge2	What do you think are the two most important issues facing (OUR COUNTRY) at the moment? The environment, climate, and energy issues	0 not mentioned 1 climate change
eb753	top2_personal_challenge2	What do you think are the two most important issues you are facing at the moment? Climate change	0 not mentioned 1 climate change
eb753	top2_eu_challenge2	What do you think are the two most important issues facing the EU at the moment? The environment and climate change	0 not mentioned 1 climate change
eb754	top3_nat_security_challenge	What do you think are the most important challenges to the security of (NATIONALITY) citizens at the moment? Environmental issues/climate change	0 not mentioned 1 mentioned
eb754	top3_eu_security_challenge2	And what do you think are the most important challenges to the security of EU citizens at the moment? Environmental issues/climate change	0 not mentioned 1 mentioned

Table A1: Climate Change Concern Survey Items *(continued)*

Survey	Survey Item Code	Question Text	Response Categories
eb754	top3_challenge2	In your opinion, which of the following do you consider to be the most serious problem currently facing the world as a whole: climate change	0 not mentioned 1 mentioned
eb754	concern10	And how serious a problem do you think climate change is at this moment?	1 not at all a serious problem / 23456789 / 10 an extremely serious problem
eb763	top2_country_challenge2	What do you think are the two most important issues facing (OUR COUNTRY) at the moment? The environment, climate, and energy issues	0 not mentioned 1 climate change
eb763	top2_personal_challenge2	What do you think are the two most important issues you are facing at the moment? Climate change	0 not mentioned 1 climate change
eb763	top2_eu_challenge2	What do you think are the two most important issues facing the EU at the moment? The environment and climate change	0 not mentioned 1 climate change
eb773	top2_country_challenge2	What do you think are the two most important issues facing (OUR COUNTRY) at the moment? The environment, climate, and energy issues	0 not mentioned 1 the environment and climate change
eb773	top2_personal_challenge2	What do you think are the two most important issues you are facing at the moment? The environment, climate, and energy issues	0 not mentioned 1 the environment and climate change

Table A1: Climate Change Concern Survey Items *(continued)*

Survey	Survey Item Code	Question Text	Response Categories
eb1013	top2_eu_challenge2	What do you think are the two most important issues facing the EU at the moment? The environment and climate change	0 not mentioned 1 the environment and climate change
eib2018	concern5	Thinking about climate change (e.g. global warming), which of the following descriptions apply best to yourself?	1 alarmed (very worried) 2 concerned (worried) 3 neutral (not really worried) 4 doubtful (not sure climate change is happening) 5 denying (don't believe that climate change is happening)
eib2018	when_threat6	When will climate change become a threat to humanity–our lives and wellbeing?	1 there is no climate change at all 2 it will become a threat in more than 20 years 3 it will become a threat in about 20 years 4 it will become a threat in about 10 years 5 it will become a threat in about 5 years 6 it is already a threat
eib2019	top3_challenge2	Climate change - In your opinion, what are the three biggest challenges that citizens in your country are currently facing?	1 climate change 2 not mentioned
eib2019	concern_personal3	Do you feel that climate change is having an impact on your everyday life?	1 yes, very much so 2 yes, somewhat 3 no, not at all
eib2019	concern_children4	Do you think that your children will feel the consequences of climate change in the future?	1 yes, certainly 2 yes, probably 3 probably not 4 certainly not
eib2020	top3_challenge2	Climate change - In your opinion, what are the three biggest challenges that citizens in your country are currently facing?	1 not mentioned 2 climate change
eib2020	top_challenge2	Do you think climate change and its consequences are the biggest challenges for humanity in the 21st century?	1 no 2 yes
eib2020	concern_personal4c	Do you feel that climate change is having an impact on your everyday life?	1 no, not at all 2 no, not really 3 yes, somewhat 4 yes, very much so
eib2021	top3_challenge2	Climate change - In your opinion, what are the three biggest challenges that citizens in your country are currently facing?	1 not mentioned 2 climate change
eib2021	top_challenge2	Do you think climate change and its consequences are the biggest challenges for humanity in the 21st century?	1 no 2 yes
eib2021	concern_personal4c	Do you feel that climate change is having an impact on your everyday life?	1 no, not at all 2 no, not really 3 yes, somewhat 4 yes, very much so
eib2021	concern_immigrate4	Do you think you will have to move to another region or country in the future because of climate change	1 certainly not 2 probably not 3 yes, probably 4 yes, certainly
eib2022	top3_challenge2	In your opinion, what are the three biggest challenges that people in your country are currently facing? Climate change	1 not mentioned 2 climate change
eib2022	concern_personal4c	Do you feel that climate change is having an impact on your everyday life?	1 no, not at all 2 no, not really 3 yes, somewhat 4 yes, very much so
eib2022	concern_catastrophe4	If we don't drastically reduce our consumption of energy and goods in the coming years, we will be heading for a global catastrophe	1 strongly agree 2 somewhat agree 3 somewhat disagree 4 strongly disagree
eib2022_afr	top5_challenges2	In your opinion, what are the five biggest challenges that people in your country are currently facing? Climate change	0 not mentioned 1 mentioned
eib2022_afr	concern_personal4c	Do you feel that climate change has an impact on your everyday life?	1 yes, very much so 2 yes, somewhat 3 no, really 4 no, not at all

Table A1: Climate Change Concern Survey Items *(continued)*

Survey	Survey Item Code	Question Text	Response Categories
eib2022_afr	concern_immigrate3	Have you already had to move to another region or country because of climate change (for example, due a lack of access to water, change in precipitation patterns, etc.)?	1 yes 2 no but I think i will have to do it in the future 3 no and i don't think it will be necessary in the future
eib2023	top3_challenge2	What are the three biggest challenges that people in your country are currently facing: climate change	1 not mentioned 2 mentioned
eib2023_latam	top5_challenges2	In your opinion, what are the five biggest challenges that people in your country are currently facing? Climate change	1 not mentioned 2 mentioned
eib2023_latam	concern_personal4c	Do you feel that climate change is having an impact on your everyday life?	1 no, not at all 2 no, not really 3 yes, somewhat 4 yes, very much so
eib2023_latam	concern_immigrate4	Do you think you will have to move to another region or country in the future because of climate change	1 certainly not 2 probably not 3 yes, certainly 4 yes, probably
eib2024	top3_challenge2	In your opinion, what are the three biggest challenges that people in your country are currently facing? Climate change	1 climate change 2 no to climate change
eib2024	concern_future4	When you think of the potential impact of climate change on your life in the future, do you feel…	1 very worried / 2 fairly worried / 3 not very worried / 4 not at all worried
eib2024	concern_immigrate4a	Do you think you will have to take the following actions in the future because of climate change: move to a cooler region or country	1 yes, certainly 2 yes, probably 3 probably not 4 certainly not
eib2024	concern_immigrate4b	Do you think you will have to take the following actions in the future because of climate change: move to a less risky place, even locally (for example to avoid floods, forest fires or other extreme weather events)	1 yes, certainly 2 yes, probably 3 probably not 4 certainly not
eib2024	concern_property4	How concerned are you that your home (house or apartment) or your car could be damaged in the coming years due to the impact of climate change ?	1 very concerned 2 somewhat concerned 3 not very concerned 4 not concerned at all
ess8	concern5	How worried about climate change	1 not at all worried 2 not very worried 3 somewhat worried 4 very worried 5 extremely worried
ess8	impact11	How good or bad do you think the impact of climate change will be on people across the world?	0 extremely bad / 123456789 / 10 extremely good
ess8	concern_energy5	How worried, energy supply interrupted by natural disasters or extreme weather	1 not at all worried 2 not very worried 3 somewhat worried 4 very worried 5 extremely worried
ess8	denial4a	You may have heard the idea that the world's climate is changing due to increases in temperature over the past 100 years. What is your personal opinion on this? Do you think the world's climate is changing?	1 definitely changing 2 probably changing 3 probably not changing 4 definitely not changing
ess10	concern5	How worried about climate change	1 not at all worried 2 not very worried 3 somewhat worried 4 very worried 5 extremely worried
ess11	concern5	How worried about climate change	1 not at all worried 2 not very worried 3 somewhat worried 4 very worried 5 extremely worried
feb123	concern_future4	How worried are you about future trends in these areas: climate change	1 very much / 2 quite a lot / 3 not much / 4 not at all
issp1993	danger5	In general, do you think that a rise in the world's temperature caused by the 'greenhouse effect' is:	1 extremely dangerous for the enviroment 2 very dangerous 3 somewhat dangerous 4 not very dangerous 5 not dangerous at all for the environment

Table A1: Climate Change Concern Survey Items *(continued)*

Survey	Survey Item Code	Question Text	Response Categories
issp1993	danger_personal5	And do you think that a rise in the world's temperature caused by the 'greenhouse effect' is	1 extremely dangerous for you and your family 2 very dangerous 3 somewhat dangerous 4 not very dangerous 5 not dangerous at all for you and your family
issp1993	problem4a	Within the next 20 years or so, a rise in the world's temperature caused by the 'greenhouse effect' wil be one of the most serious problems for [country]	1 definitely true 2 probably true 3 probably not true 4 definitely not true
issp2000	danger5	In general, do you think that a rise in the world's temperature caused by the 'greenhouse effect' is:	1 extremely dangerous for the enviroment 2 very dangerous 3 somewhat dangerous 4 not very dangerous 5 not dangerous at all for the environment
issp2010	danger5	In general, do you think that a rise in the world's temperature caused by climate change is	1 extremely dangerous for the enviroment 2 very dangerous 3 somewhat dangerous 4 not very dangerous 5 not dangerous at all for the environment
issp2020	impact11	How bad or good do you think the impacts of climate change will be for the world as a whole?	0 extremely bad / 123456789 / 10 extremely good
issp2020	impact_country11	How bad or good do you think the impacts of climate change will be for [country]?	0 extremely bad / 123456789 / 10 extremely good
issp2020	danger5	In general, do you think that a rise in the world's temperature caused by climate change is	1 extremely dangerous for the enviroment 2 very dangerous 3 somewhat dangerous 4 not very dangerous 5 not dangerous at all for the environment
lb2007	concern_country4	How much do you think global warming affects (country)?	1 a lot 2 some effect 3 little 4 no effect
lb2007	concern_personal4b	And how much do you think it affects you?	1 a lot 2 some effect 3 little 4 no effect
lb2007	concern_economy4	Please tell me how worried you are that environmental problems and global warming will negatively effect the country's development	1 very worried 2 fairly worried 3 not very worried 4 not worried at all
lb2010	concern_country4	How much do you think global warming affects (country)?	1 a lot 2 some effect 3 little 4 no effect
lb2010	concern_personal4b	And how much do you think it affects you and your family?	1 a lot 2 some effect 3 little 4 no effect
lb2011	concern_country4	How much do you think climate change affects (country)?	1 a lot 2 some effect 3 little 4 no effect
lb2011	concern_personal4b	And how much do you think it affects you and your family?	1 a lot 2 some effect 3 little 4 no effect
lb2017	denial4a	There is no such thing as the problem of climate change	1 strongly agree 2 agree 3 disagree 4 strongly disagree
lb2017	urgent4	With which of the following statements about climate change do you agree the most?	1 it is an urgent problem we need to address today 2 it is not yet an urgent problem, but it will be in the future 3 it is an urgent probleem but there is little to do, too late to act 4 it will never be necessary to address it
lits_wave2	problem2	In your opinion, which of the following do you consider to be a very serious problem currently facing the world: climate change	0 not mentioned 1 mentioned
lits_wave2	concern5	How concerned are you about climate change?	1 not at all / 234 / 5 extremely concerned
lits_wave2	harm3	As a result of climate change, do you think people in our country will be	1 on balance, better-off 2 not affected much 3 on balance, worse-off
lits_wave2	denial5	The seriousness of climate change has been exaggerated	1 strongly disagree 2 disagree 3 neither agree nor disagree 4 agree 5 strongly agree

Table A1: Climate Change Concern Survey Items *(continued)*

Survey	Survey Item Code	Question Text	Response Categories
nsee_combo	denial4	Scientists overstating evidence about global warming for their own interests	1 strongly agree 2 somewhat agree 3 somewhat disagree 4 strongly disagree
nsee_combo	concern4	How concerned are you about the issue of global warming	1 very concerned 2 somewhat concerned 3 not too concerned 4 not at all concerned
nsee_combo	concern4	How concerned are you about the issue of climate change	1 very concerned 2 somewhat concerned 3 not too concerned 4 not at all concerned
pew2006	concern5	How much do you personally worry about global warming?	0 never heard of it 1 not at all 2 only a little 3 a fair amount 4 a great deal
pew2007	problem4	On another topic, in your view, is global warming a very serious problem, somewhat serious, not too serious, or not a problem?	1 very serious 2 somewhat serious 3 not too serious 4 not a problem
pew2008	problem4	On another topic, in your view, is global warming a very serious problem, somewhat serious, not too serious, or not a problem?	1 very serious 2 somewhat serious 3 not too serious 4 not a problem
pew2009_spring	problem4	On another topic, in your view, is global climate change a very serious problem, somewhat serious, not too serious, or not a problem?	1 very serious 2 somewhat serious 3 not too serious 4 not a problem
pew2010	problem4	On another topic, in your view, is global climate change a very serious problem, somewhat serious, not too serious, or not a problem?	1 very serious 2 somewhat serious 3 not too serious 4 not a problem
pew2013	important_threat3b	I'd like your opinion about some possible international concerns for (survey country). Do you think that g. global climate change is a major threat, a minor threat or not a threat to (survey country)?	1 major threat 2 minor threat 3 not a threat
pew2014_india	important_threat3b	I'd like your opinion about some possible international concerns for (survey country). Do you think that g. global climate change is a major threat, a minor threat or not a threat to (survey country)?	1 major threat 2 minor threat 3 not a threat
pew2015	concern4	Please tell me how concerned you are, if at all, about: global climate change	1 very concerned 2 somewhat concerned 3 not too concerned 4 not at all concerned
pew2015	problem4	On another topic, in your view, is global climate change a very serious problem, somewhat serious, not too serious, or not a problem?	1 very serious 2 somewhat serious 3 not too serious 4 not a problem
pew2015	when_harm4	Do you think global climate change is harming people around the world now, will harm people in the next few years, will not harm people for many years or will never harm people?	1 now 2 in the next few years 3 not for many years 4 never
pew2015	concern_personal4	How concerned are you, if at all, that global climate change will harm you personally at some point in your lifetime?	1 very concerned 2 somewhat concerned 3 not too concerned 4 not at all concerned
pew2016	important_threat3b	I'd like your opinion about some possible international concerns. Do you think that d. global climate change is a major threat, a minor threat or not a threat to (survey country)?	1 major threat 2 minor threat 3 not a threat
pew2017	important_threat3b	I'd like your opinion about some possible international concerns for (survey country). Do you think that d. global climate change is a major threat, a minor threat or not a threat to (survey country)?	1 major threat 2 minor threat 3 not a threat

Table A1: Climate Change Concern Survey Items *(continued)*

Survey	Survey Item Code	Question Text	Response Categories
pew2018	important_threat3b	I'd like your opinion about some possible international concerns for (survey country). Do you think that d. global climate change is a major threat, a minor threat or not a threat to (survey country)?	1 major threat 2 minor threat 3 not a threat
pew2020	important_threat3b	I'd like your opinion about some possible international concerns for (survey country). Do you think that d. global climate change is a major threat, a minor threat or not a threat to (survey country)?	1 major threat 2 minor threat 3 not a threat
pew2021	concern_personal4	How concerned are you, if at all, that global climate change will harm you personally at some point in your lifetime?	1 very concerned 2 somewhat concerned 3 not too concerned 4 not at all concerned
pipa2007	important_threat3a	Below is a list of possible threats to the vital interest of [survey country] in the next 10 years. For each one, please select whether you see this as a critical threat, an important but not critical threat, or not an important threat at all...Global Warming	1 critical threat 2 important but not critical threat 3 not important threat
pipa2007	urgent3	There is a controversy over what the countries of the world, including [survey country], should do about the problem of global warming. Here are three statements. Please tell me which statement comes closest to your own point of view."	1 until we are sure that global warming is really a problem, we should not take any steps that would have economic costs 2 the problem of global warming should be addressed, but its effects will be gradual, so we can deal with the problem gradually by taking steps that are low in cost 3 global warming is a serious and pressing problem. we should begin taking steps now even if this involves significant costs
pipa2009	problem4	In your view, is climate change, also called global warming, a serious problem?	1 serious problem 2 somewhat serious 3 not too serious 4 not a problem
pipa2009	harm_food4	If climate change is left unchecked worldwide, how much do you think climate change, will affect each of the following in our country: The types of food we produce	1 none at all 2 not very much 3 some 4 a lot
pipa2009	harm_wildlife4	If climate change is left unchecked worldwide, how much do you think climate change, will affect each of the following in our country: The types of plants and animals that can live here	1 none at all 2 not very much 3 some 4 a lot
pipa2009	harm_water4	If climate change is left unchecked worldwide, how much do you think climate change, will affect each of the following in our country: Rainfall and available water resources	1 none at all 2 not very much 3 some 4 a lot
pipa2009	harm_prices4	If climate change is left unchecked worldwide, how much do you think climate change, will affect each of the following in our country: The price of food and other essential goods	1 none at all 2 not very much 3 some 4 a lot
pipa2009	harm_disasters4	If climate change is left unchecked worldwide, how much do you think climate change, will affect each of the following in our country: The likelihood of natural disasters, like droughts or floods	1 none at all 2 not very much 3 some 4 a lot
pipa2009	harm_coastline4	If climate change is left unchecked worldwide, how much do you think climate change, will affect each of the following in our country: our coastline	1 none at all 2 not very much 3 some 4 a lot

Table A1: Climate Change Concern Survey Items *(continued)*

Survey	Survey Item Code	Question Text	Response Categories
pipa2009	harm_homes4	If climate change is left unchecked worldwide, how much do you think climate change, will affect each of the following in our country: People's need to move their homes to different locations	1 none at all 2 not very much 3 some 4 a lot
pipa2009	when_harm6	When do you think climate change will start to substantially harm people in [country]?	1 people are being harmed now 2 in 10 years 3 in 25 years 4 in 50 years 5 in 100 years 6 never
pipa201007	problem4	In your view, is climate change, also called global warming, a serious problem?	1 serious problem 2 somewhat serious 3 not too serious 4 not a problem
pipa201007	harm_food4	If climate change is left unchecked worldwide, how much do you think climate change, will affect each of the following in our country: The types of food we produce	1 none at all 2 not very much 3 some 4 a lot
pipa201007	harm_wildlife4	If climate change is left unchecked worldwide, how much do you think climate change, will affect each of the following in our country: The types of plants and animals that can live here	1 none at all 2 not very much 3 some 4 a lot
pipa201007	harm_water4	If climate change is left unchecked worldwide, how much do you think climate change, will affect each of the following in our country: Rainfall and available water resources	1 none at all 2 not very much 3 some 4 a lot
pipa201007	harm_prices4	If climate change is left unchecked worldwide, how much do you think climate change, will affect each of the following in our country: The price of food and other essential goods	1 none at all 2 not very much 3 some 4 a lot
pipa201007	harm_disasters4	If climate change is left unchecked worldwide, how much do you think climate change, will affect each of the following in our country: The likelihood of natural disasters, like droughts or floods	1 none at all 2 not very much 3 some 4 a lot
pipa201007	harm_coastline4	If climate change is left unchecked worldwide, how much do you think climate change, will affect each of the following in our country: our coastline	1 none at all 2 not very much 3 some 4 a lot
pipa201007	harm_homes4	If climate change is left unchecked worldwide, how much do you think climate change, will affect each of the following in our country: People's need to move their homes to different locations	1 none at all 2 not very much 3 some 4 a lot
pipa201007	when_harm6	When do you think climate change will start to substantially harm people in [country]?	1 people are being harmed now 2 in 10 years 3 in 25 years 4 in 50 years 5 in 100 years 6 never
rtm2022	concern_consequences4	Given current events, how concerned are you about each of the following in [country]? Consequences of climate change	1 not at all concerned / 2 not so concerned / 3 somewhat concerned / 4 very concerned
rtm2022	concern4	How worried are you about climate change?	1 not at all concerned / 2 not very concerned / 3 somewhat concerned / 4 very concerned
szazadveg_cc20	concern5	How worried are you about climate change?	1 not at all worried / 2 not very worried / 3 somewhat worried / 4 very worried / 5 extremely worried
tt2002	important_threat3a	I am going to read you a list of possible threats to the vital interest of [own country] in the next 10 years. For each one, please tell if you see this as an extremely important threat, an important threat, or not an important threat at all	1 extremely important threat 2 important threat 3 not important threat

Table A1: Climate Change Concern Survey Items *(continued)*

Survey	Survey Item Code	Question Text	Response Categories
tt2002	important_threat3	I am going to read you a list of possible international threats to Europe/US in the next 10 years. Please tell me if you think each one on the list is an extremely important threat, an important threat, or not an important threat at all. f) the effects of global warming	1 extremely important threat 2 important threat 3 not important threat
tt2005	important_threat3	I am going to read you a list of possible international threats to Europe/US in the next 10 years. Please tell me if you think each one on the list is an extremely important threat, an important threat, or not an important threat at all. f) the effects of global warming	1 extremely important threat 2 important threat 3 not important threat
tt2005	concern_personal4a	And in the next 10 years, please tell me how likely you are to be personally affected by each of the following threats: The effects of global warming	1 very likely 2 somewhat likely 3 not too likely 4 not likely at all
tt2006	important_threat3	I am going to read you a list of possible international threats to Europe/US in the next 10 years. Please tell me if you think each one on the list is an extremely important threat, an important threat, or not an important threat at all. f) the effects of global warming	1 extremely important threat 2 important threat 3 not important threat
tt2006	important_threat4	I am going to read you a list of possible international threats to Europe/US in the next 10 years. Please tell me if you think each one on the list is an extremely important threat, an important threat, or not an important threat at all. f) the effects of global warming	1 extremely important threat 2 important threat 3 not important threat
tt2007	concern_personal4a	And in the next 10 years, please tell me how likely you are to be personally affected by each of the following threats: The effects of global warming	1 very likely 2 somewhat likely 3 not too likely 4 not likely at all
tt2008	concern_personal4a	And in the next 10 years, please tell me how likely you are to be personally affected by each of the following threats. - The effects of global warming	1 very likely 2 somewhat likely 3 not too likely 4 not likely at all
tt2009	concern4	To what extent are you concerned about: climate change	1 very concerned 2 somewhat concerned 3 not very concerned 4 not at all concerned
wrp19_21	threat3	Will climate change be a threat to people in country in next 20 years?	1 very serious threat / 2 somewhat serious threat / 3 not a threat at all
wvs_combo	concern_global4	Now let's consider environmental problems in the world as a whole. Please, tell me how serious you consider each of the following to be for the world as a whole. Is it very serious, somewhat serious, not very serious or not serious at all? Global warming or the greenhouse effect	1 very serious / 2 somewhat serious / 3 not very serious / 4 not serious at all

* Survey dataset codes correspond to those used in the DCPOtools R package (Solt, Hu, and Tai 2019).

But these environmental measures to mitigate climate change can have social and economic consequences on people today. Keeping in mind the effects of different environmental policies to combat climate change, what degree are you concerned about the following possible economic outcomes in [country]? Costs of (mandatory) climate-neutral adaptation of heating and cooling systems (e.g. renewable energy systems, energy efficiency renovations)	1 not at all concerned / 2 not so concerned / 3 somewhat concerned / 4 very concerned

* Survey dataset codes correspond to those used in the DCPOtools R package (Solt, Hu, and Tai 2019).

A2 Meta-Regression Results (Needs Revision)

To assess whether the difference between women and men in climate change concern is larger in richer countries than in poorer ones, the available cross-national surveys on climate concern are broken into their separate national components, yielding a total of 2,834 national surveys. These surveys often include multiple items tapping concern for climate change and thus provide multiple opportunities to observe the relationship between gender and climate concern; there are 6,268 of these opportunities in total. In the language of meta-analysis, the analysis realized from each of these opportunities is a study. Correlation coefficients are frequently used in meta-analysis to bring results from different and otherwise incomparable analyses onto a common scale; they are also equivalent to the simple regressions at the individual level of the main models of Bush and Clayton (2023, 593, Table 1, Models 1 and 4). Because the sampling distribution of correlations is skewed, the Fisher's z transformation is applied to each correlation to yield a normal distribution of effect sizes (see Schmid, Stijnen, and White 2020, 35; Godefroidt 2023, 25). Therefore, each study here consists of the z-transformed correlation of the individual-level indicator variable for a woman respondent with one survey item of climate concern in one country-year.

These studies are plotted in the left panel of Figure 1. The correlation between respondents' gender and their climate concern expressed in a single survey item appears on the y-axis; the vertical whiskers on each point represent uncertainty in the correlation due to sampling error. The economic development of the country at the time of the survey,

Notes: The left panel shows a scatterplot of the correlation between an indicator variable for a woman respondent and concern for climate change against GDP/capita; each observation represents one climate-change item in a single national survey. The right panels report the results of a four-level meta-regression of these observations with varying intercepts for country, item, and survey project-wave; n = 6,268 survey-item-country-years.

Figure A2: The Difference Between Women and Men in Climate Concern Is Generally Larger in Richer Countries Than in Poorer Countries

measured as in Bush and Clayton (2023) as the log of GDP/capita, is on the x-axis.

Analyses that seek to explain differences across studies—here, the differences in the observed correlations between gender and climate concern survey items—are known as meta-regressions (see Higgins, López-López, and Aloe 2020). The right panel of Figure 1 presents the results of a meta-regression of these correlations on economic development. This meta-regression takes into account the lack of independence across studies with a Bayesian multilevel model with varying intercepts for each country, survey, and item. Using a Bayesian approach allows the uncertainty in the correlations due to sampling error to be seamlessly incorporated into the model; the varying intercepts work to minimize the possibility that other particularities of the country, survey, or item of a study are not conflated with the context of economic development in which the study took place.

A3 Meta-Regression Tabular Results

Table A4: Meta-Regression Tabular Results

	Climate Concern		Benefits vs Costs		Across Risks	
	Median	SD	Median	SD	Median	SD
Intercept	-0.258	0.019	0.034	0.029	-0.132	0.014
Logged GDP/capita	0.029	0.002	-0.003	0.003	0.018	0.001

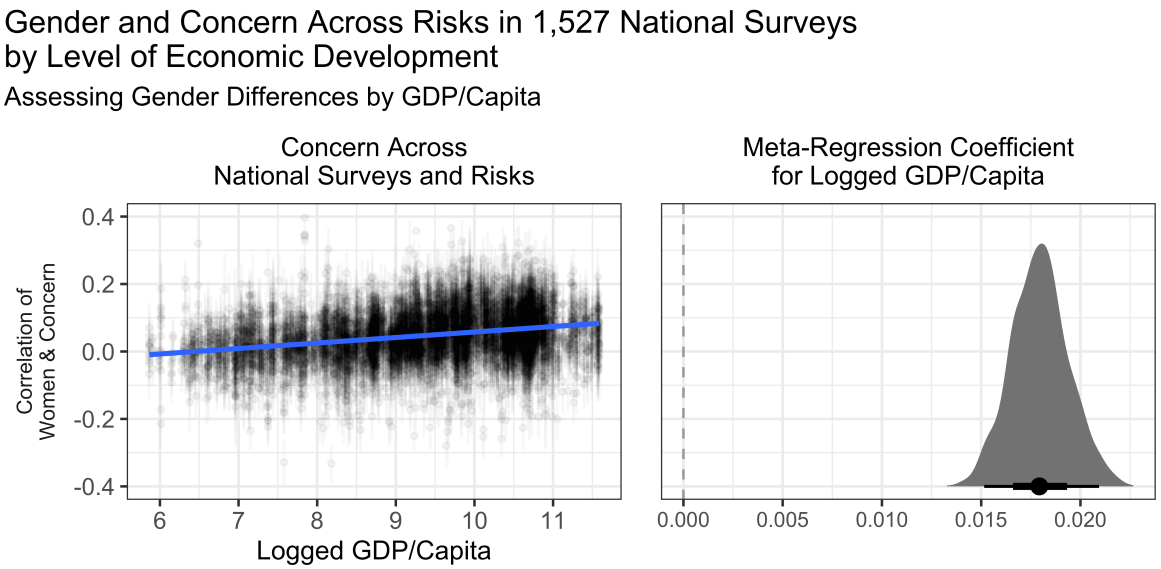

A4 Economic Development and Masculinity Norms

Masculinity norms are societal understandings of what behavior is considered appropriate for men; these norms are shared in the sense that even those members of a society who reject them have no trouble in identifying them (see, e.g., Thompson and Pleck 1986). One aspect of traditional masculinity as it is understood in many societies is that men are socially expected to be tough, to be fearless, to diminish risks of all kinds (see Thompson and Pleck 1986; Tyler and Fairbrother 2018; Wedgwood, Connell, and Wood 2023). That is to say that in these settings, notwithstanding men's *awareness* of a given threat, they are expected to downplay its severity, and their conformity to these expectations are rewarded with respect (Thomson 2020, 151).

The argument here is that men's greater adherence to this traditional masculinity norm in richer countries is the explanation for the wider gender differences in expressed climate concern in those countries found by Bush and Clayton (2023) and confirmed above. One recent paper has found that the prevalence of other aspects of traditional masculinity—valorizing winning above all, violence, men's control over women, help avoidance, and disdain for homosexuals—are positively correlated with economic development in a single cross-sectional survey of 43 African, Asian, and European countries (De Haas et al. 2024). This is perhaps surprising, given that gender egalitarian views are robustly positively related to economic development across both space and time (see, e.g., Welzel 2013; Woo, Goldberg, and Solt 2023), but this paper's authors note that the masculinity norms it documents are only weakly related to attitudes regarding the proper role of women in society (De Haas et al. 2024, 2–3). Whether the norm of masculine fearlessness and dismissal of risk follows the same pattern with regard to economic development as these other traditional masculinity norms is an open question.

To find out, cross-national surveys with survey items similar to common questions on climate change concern were collected. These items asked respondents the extent of the worry or concern they felt or to assess the severity of the problem or threat with regard to a wide range of potential risks. This collection of cross-national surveys includes some 239 different survey items. The dozen most frequent topics of potential concern are crime, job loss, drinking water contamination, terrorism, food safety, mental health, extreme weather, immigration, contagious diseases, government corruption, identity theft, war, public schools, and roadway accidents, but the topics covered also include such topics as police abuses, globalization, energy dependence, social discrimination, and eating a balanced diet. Once more, cross-national surveys are divided into their component national surveys and multiple items from a single survey are treated separately. This provides more than ten thousand individual studies of concern.

Figure A3 shows that gender differences in concern across all of these risks are greater in richer countries. This finding supports the argument that the pattern in climate change concern identified in Bush and Clayton (2023) and further strengthened by Figure 1 above

Notes: The left panel shows a scatterplot of the correlation between an indicator variable for a woman respondent and concern for a wide range of topics against GDP/capita; each observation represents one item in a single national survey. The right panels report the results of a four-level meta-regression of these observations with varying intercepts for country, item, and survey project-wave; *n* = 10,043 survey-item-country-years.

Figure A3: In Richer Countries, Women Generally Express More Concern Than Men *Regardless of the Source of Risk*

is the product of a norm of masculine performative fearlessness that is more widespread where levels of economic development are higher.
